1. 1.8 V TO 3.3 V SYSTEM I2C CONTROL BUS

2. TWO 16-BIT GPIO EXPANDERS

3. EMC2305 FOUR-FAN CONTROL WITH FAILSAFE

4. THREE HIGH-ACCURACY TEMPERATURE SENSORS

5. SIX 12 V TOP-PANEL STATUS-LAMP DRIVERS

6. INDEPENDENT WARM-WHITE PANEL LIGHTS

TCA9535 0x20 captures source, fan, temperature, and power-monitor alerts.
TMP117 sensors monitor CMS, modem, and board/power zones at 0x48/0x49/0x4A.
EMC2305 runs provider full-speed hardware failback if the controller or firmware fails.
EMC2305 controls CPU, modem, intake, and exhaust fans independently
