1. AK4458VN EXACT PIN CAPTURE

2. SERIAL-CONTROL DEFAULTS

CAD1:0=01 selects DAC address 0x11; ADC remains at 0x10. TDM256 and 32-bit I2S are written only while mute is asserted.

The unused SDTI2/3/4 and DSD pins are tied low in PCM TDM mode to prevent floating inputs.

3. REFERENCES AND LOCAL BYPASS

QFN exposed-pad geometry and assembly coupon remain a routing release gate
DAC mute remains asserted until rails, clocks, reset, and register readback pass
AVDD=5.0 V, TVDD=3.3 V, internal 1.8 V LDO enabled
TDM256, 32-bit I2S, slave mode is programmed and read back over I2C
